

DACUM Occupational Research Chart for Nanotechnology Technician

Occupation Description: Versatile, flexible nanotechnology technician must be able to provide support for developing nano product design; building, installing, and monitoring nanotechnology equipment and processes, problem solving, quality assurance, and preventive maintenance/repair of equipment. Roles may include technical support, engineering research, and/or testing/verification of a variety of products/processes for a wide range of industries. Must be able to thrive in a rather chaotic, cutting-edge scientific work environment.

	Duties	Tasks												
A	Characterize Nano-scale Materials	<table border="1"> <tr> <td>A1 Clarify customer requirements</td> <td>A2 Select appropriate analytical equipment</td> <td>A3 Verify GRR</td> <td>A4 Check SPC</td> <td>A5 Prepare sample</td> <td>A6 Collect data</td> <td>A7 Manage data</td> <td>A8 Analyze data</td> <td>A9 Investigate data anomalies</td> <td>A10 Report findings</td> </tr> </table>	A1 Clarify customer requirements	A2 Select appropriate analytical equipment	A3 Verify GRR	A4 Check SPC	A5 Prepare sample	A6 Collect data	A7 Manage data	A8 Analyze data	A9 Investigate data anomalies	A10 Report findings		
A1 Clarify customer requirements	A2 Select appropriate analytical equipment	A3 Verify GRR	A4 Check SPC	A5 Prepare sample	A6 Collect data	A7 Manage data	A8 Analyze data	A9 Investigate data anomalies	A10 Report findings					
B	Execute Device Processes	<table border="1"> <tr> <td>B1 Clarify customer requirements</td> <td>B2 Identify process flow</td> <td>B3 Verify components</td> <td>B4 Deposit materials</td> <td>B5 Transfer pattern</td> <td>B6 Assemble components</td> <td>B7 Verify process results</td> <td>B8 Package device</td> <td>B9 Test and verify device</td> <td>B10 Characterize performance</td> </tr> </table>	B1 Clarify customer requirements	B2 Identify process flow	B3 Verify components	B4 Deposit materials	B5 Transfer pattern	B6 Assemble components	B7 Verify process results	B8 Package device	B9 Test and verify device	B10 Characterize performance		
B1 Clarify customer requirements	B2 Identify process flow	B3 Verify components	B4 Deposit materials	B5 Transfer pattern	B6 Assemble components	B7 Verify process results	B8 Package device	B9 Test and verify device	B10 Characterize performance					
C	Build Nano-technology Systems	<table border="1"> <tr> <td>C1 Clarify customer requirements</td> <td>C2 Perform process planning</td> <td>C3 Collect parts from inventory</td> <td>C4 Review assembly drawings</td> <td>C5 Prepare parts</td> <td>C6 Build subsystems</td> <td>C7 Test and verify system components</td> <td>C8 Assemble system</td> <td>C9 Integrate control systems</td> <td>C10 Test/verify system interface</td> <td>C11 Characterize performance</td> <td>C12 Obtain Customer acceptance</td> </tr> </table>	C1 Clarify customer requirements	C2 Perform process planning	C3 Collect parts from inventory	C4 Review assembly drawings	C5 Prepare parts	C6 Build subsystems	C7 Test and verify system components	C8 Assemble system	C9 Integrate control systems	C10 Test/verify system interface	C11 Characterize performance	C12 Obtain Customer acceptance
C1 Clarify customer requirements	C2 Perform process planning	C3 Collect parts from inventory	C4 Review assembly drawings	C5 Prepare parts	C6 Build subsystems	C7 Test and verify system components	C8 Assemble system	C9 Integrate control systems	C10 Test/verify system interface	C11 Characterize performance	C12 Obtain Customer acceptance			
D	Perform or Assist With Product Development	<table border="1"> <tr> <td>D1 Perform product research</td> <td>D2 Design prototypes</td> <td>D3 Evaluate prototypes</td> <td>D4 Revise product design</td> </tr> </table>	D1 Perform product research	D2 Design prototypes	D3 Evaluate prototypes	D4 Revise product design								
D1 Perform product research	D2 Design prototypes	D3 Evaluate prototypes	D4 Revise product design											
E	Maintain Equipment	<table border="1"> <tr> <td>E1 Outline PM program</td> <td>E2 Perform PMs</td> <td>E3 Test and verify (SPC)</td> <td>E4 Verify customer complaint</td> <td>E5 Perform troubleshooting</td> <td>E6 Collect appropriate tools</td> <td>E7 Implement corrective action</td> <td>E8 Replace parts or components</td> <td>E9 Provide service report to customer</td> <td>E10 Maintain service records</td> </tr> </table>	E1 Outline PM program	E2 Perform PMs	E3 Test and verify (SPC)	E4 Verify customer complaint	E5 Perform troubleshooting	E6 Collect appropriate tools	E7 Implement corrective action	E8 Replace parts or components	E9 Provide service report to customer	E10 Maintain service records		
E1 Outline PM program	E2 Perform PMs	E3 Test and verify (SPC)	E4 Verify customer complaint	E5 Perform troubleshooting	E6 Collect appropriate tools	E7 Implement corrective action	E8 Replace parts or components	E9 Provide service report to customer	E10 Maintain service records					
F	Control Environment	<table border="1"> <tr> <td>F1 Monitor temperature and humidity</td> <td>F2 Monitor vibration</td> <td>F3 Monitor particles and airborne contaminants</td> <td>F4 Measure electromagnetic discharge</td> <td>F5 Maintain specs on quality of source power</td> <td>F6 Enforce company P&Ps</td> <td>F7 Follow HAZMAT procedures</td> </tr> </table>	F1 Monitor temperature and humidity	F2 Monitor vibration	F3 Monitor particles and airborne contaminants	F4 Measure electromagnetic discharge	F5 Maintain specs on quality of source power	F6 Enforce company P&Ps	F7 Follow HAZMAT procedures					
F1 Monitor temperature and humidity	F2 Monitor vibration	F3 Monitor particles and airborne contaminants	F4 Measure electromagnetic discharge	F5 Maintain specs on quality of source power	F6 Enforce company P&Ps	F7 Follow HAZMAT procedures								
G	Maintain Personal Qualifications	<table border="1"> <tr> <td>G1 Identify your needs, gaps</td> <td>G2 Pursue additional training</td> <td>G3 Engage in cross-training and mentoring</td> <td>G4 Attend in-house training</td> <td>G5 Read trade and related literature</td> </tr> </table>	G1 Identify your needs, gaps	G2 Pursue additional training	G3 Engage in cross-training and mentoring	G4 Attend in-house training	G5 Read trade and related literature							
G1 Identify your needs, gaps	G2 Pursue additional training	G3 Engage in cross-training and mentoring	G4 Attend in-house training	G5 Read trade and related literature										

Acronyms and Term Definitions

AFM – Atomic forces microscope
 GD&T – Geometric dimensions and tolerances
 GRR – Gauge repeatability and reproductability
 HAZMAT – Hazardous materials handling and disposal
 ISO – International Standards Organization
 MEMS – Micro-electromechanical systems
 MOEMS – Micro-opto-electromechanical systems
 PM – Preventive maintenance
 P&Ps – Policies and procedures
 QC/QA – Quality control/assurance
 SEM – Scanning electron microscope
 SPC – Statistical process control
 TEM – Transmission electron microscope

General Knowledge and Skills

Semiconductor manufacturing processes
Nanotechnology manufacturing processes
Electrical, chemical, and mechanical assembly processes
Mechanical precision to the nano scale
Volumetric measurement to the nano scale
High precision electrical measurements
Crystallography and metallurgy
Toughness, strength, and ductility of materials
Microscopy and spectroscopy
Basic chemistry and quantum physics
Familiarity with quantum effects
Use of measuring instruments, tools
Nano scale metrology
Unit conversion
Technical communication skills
Technical math, including algebra, geometry, and statistics
Vacuum systems
Gauge R&R
Reading mechanical drawings
Quality assurance (incl. statistical process control)
Implements continuous improvement techniques
Materials handling (including hazardous materials)
Safety awareness and practice
Understanding of industry reference materials
ISO 9000
Geometric dimensions and tolerances (GD&T)
Risk management
General computer skills
Business skills
Organizational skills
Problem solving skills
Project management skills
Interpersonal skills

Future Trends and Concerns

Rate of nanotechnology industry development
Explosion of knowledge, keeping pace
Public perception
Potential toxicity of materials at nano scale
Environmental health and safety concerns and regulations
Could be disruptive of future economy
Quantized (non-conventional behavior of matter)
Technology migration out of the U.S., and decrease in industrial research in the U.S.
Broad based dilution of nano resources

Tools, Equipment, Materials and Supplies

TEM and SEM microscopes
Advanced optical microscopes
Scanning probe microscopes (AFM and others)
Semiconductor manufacturing equipment
Thin-film measurement equipment: profilometers and ellipsometers to the nano scale
Spectrophotometer
Laser interferometer
X-ray (fluorescence and diffraction)
Computer software (word processing, spreadsheet, database, presentation, email, etc.)
Reference handbooks
Lab equipment (materials testing, etc.)
Oscilloscope
Voltmeter
Microbalance
Frequency generator
Instrument interface software
Personal protective equipment
NOTE: "tools" in the context of nanotechnology research and manufacturing refers to complex analytical or processing equipment

Worker Attitudes, Traits and Behaviors

Willing to take on high-risk endeavors
Adaptable, open to change
Professional
Reliable
Gives, receives criticism well
Strives for continuous improvement
Analytical, detail oriented
Attention to craftsmanship
Demonstrates quality awareness
Logical
Self-motivated, independent worker
Team worker, mature
Thorough
Problem-solving skills
Persistent
Honest, shows integrity
Resourceful
Punctual
